## GSM-PRO CONTROLLER

Conta-Clip's GSM PRO module provides a solution for remotely monitoring and controlling processes by means of SMS signals, emails & GPRS.

Status messages are able to be sent over the GSM network if a process has reached a specified level. The digital and analog input values can also be transmitted via SMS text message. If the values indicate a critical status, the GSM-PRO device gives the service technician the option to control the analogue and digital outputs by SMS. This enables him to take action immediately without being constantly on-site. The module can be used stand alone, but can also be used as a remote module in your control system. The accompanying software can be used to easily set the parameters for the inputs and outputs.

The GSM-PRO Controller can be used whenever the status of process parameters must be monitored. Several application possibilities include: Wind Power Sites, Pump and Irrigation, Poultry Farms, monitoring of remote unmanned sites and level monitoring.
